

6, Regarding the Issues Encountered During Writing, and a Hope for Understanding

Up until my undergraduate graduation and return to Xi'an, all the discoveries and perspectives worth writing about are contained right here. This period of slightly over six months has indeed been extraordinary for me.

Yet, even so, the more new phenomena I discover, the clearer it becomes that there are still many problems my personal capabilities are insufficient to solve, and the narratives in many places inevitably contain inadequacies. What worries me is not that there are still too many things I do not understand; for even the most erudite scholars cannot exhaust all the knowledge in the world. *Life is finite, while knowledge is infinite; this is an eternal sorrow, so why lament it?* (人生有涯，而知无涯，此万古愁也，何必哀之。)

However, China's social environment is highly peculiar. Rational theories within official doctrines are exceedingly rare (凤毛麟角). Coupled with the information barriers artificially erected by our government, it is genuinely difficult to align many concepts with the international academic community. When I arrive at intellectual territories untrodden by predecessors, I have no choice but to temporarily name certain new phenomena myself; inadequacies are inevitable.

Regarding some narratives that inherited our country's traditional expressions, which I have mentioned previously, I once again express my apologies to any potential readers.

For example, the term "**slavery society**" (奴隶制社会) in Chinese originates from the Soviet "Five-Stage Theory" (五段论). Even though Chinese intellectuals have long known that a **slavery society** was fundamentally not the binary, antagonistic social structure of slave-owners versus slaves as claimed by the Bolsheviks, there is no more precise substitute available domestically, so I can only continue to use it.

Whether the ruling class of this period can be generalized as the "slave-owner class" is also highly questionable. In my previous narratives, I replaced the term "ruling class of the slavery society" with "*early nobility* (早期贵族) *evolved from clan chieftains, the priestly class* (宗教祭祀), *and military commanders* (saying 'early' is to contrast them with the land-owning nobility generated during the feudalization period)." But this is merely my personal view.

An even larger problem is the use of terms like "**capitalist society**" (资本主义社会) and "capitalist states." The Chinese officialdom uniformly adopts this descriptive method for Western Europe and the United States. Although its flaws are glaringly obvious, without a profound understanding of these countries' societies, I have no way to devise an alternative nomenclature and can only adopt the common domestic terminology.

The complexity of modern social structures and the meticulousness of the division of labor are unprecedented. Class division today is far more difficult than it was not just before the Industrial Revolution, but even compared to Marx's era. Today, the term "**capitalist society**" indeed carries the suspicion of overly exaggerating the irreconcilable class contradictions between the bourgeoisie and the proletariat (*though anyone who truly believes there are no contradictions is a fool*).

However, if we vaguely refer to Western countries as "democratic states," this clearly fails to grasp the fundamental commonality of these nations. Western democratic systems are obviously built upon a certain foundation of social reality; they could not possibly have grown out of thin air. One only needs to observe those countries that lack the equivalent social conditions to the West yet

attempt to forcibly transplant Western democratic systems—the failure of such political practices is a frequent occurrence.

Personally, I am far more inclined to reinterpret the so-called "XX-based societies." That is, to emphasize the status of the defining factor as the **primary factor of production** (首位生产要素), to point out the primary method of exploitation, and to cease emphasizing the high degree of antagonism between the ruling and ruled classes as the primary characteristic.

For example: A **slavery society** (奴隶制社会) is a society where *labor* occupies the status of the **primary factor of production**, and directly exploiting labor through forced labor is the primary method of exploitation. A **feudal society** (封建社会) is a society where *land* occupies the status of the **primary factor of production** (means of production), and exploiting the **surplus of agricultural production** (农业生产剩余) through rent and taxes is the primary method of exploitation. A **capitalist society** (资本主义社会) is a society where *capital* occupies the status of the **primary factor of production**, and exploiting the surplus value of laborers (*this point remains doubtful to me, but I will write it this way temporarily according to Marx*) is the primary method of exploitation.

Redefining them in this manner might be much more rational, and from the perspective of the Chinese people, it holds far greater significance.

After all, Marx's approach—which only considers class contradictions within typical class societies—is glaringly and utterly insufficient to explain the history of the Chinese Empire. **The principal contradiction here can absolutely be defined as the contradiction between the bureaucratic stratum (官僚阶层) and all other classes!**

This is also why, ever since I started writing this in 2023, I have heavily emphasized that while we must affirm the justice and rationality of the oppressed people's resistance, we must adopt an extremely prudent attitude when discussing the contradiction between the ruling class and the ruled class.

Because the **bureaucratic state** (官僚国家) weaponizing this rhetoric is no longer just a mere possibility; it is a brutal reality that has been occurring for a whole century since the establishment of Soviet Russia.

Humanity cannot keep stumbling over the same stone endlessly! (人总不能在同一个地方不停跌倒。)

Of course, readers who encounter these records should not assume that I have made absolutely no theoretical contributions regarding the use of these concepts. While it is true that I am helpless regarding matters outside of China that I lack information on, I have indeed accomplished a massive amount of work in "**rectifying historical truths**" (拨乱反正) concerning the concepts of Chinese history.

For instance, the Chinese official narrative designates the period from the Qin Dynasty to the Qing Dynasty as our country's "feudal period" (封建时期). **I have obviously and entirely discarded this absurd and deceptive doctrine used to brainwash the commoners.**

In my narrative, the period from the Qin and Han Dynasties up to the Western Jin is designated as the "**classical empire**" (古典帝国) or classical period of China. When I speak of "feudal China," I

am referring strictly to the Chinese society during the four hundred years spanning the 3rd, 4th, 5th, and 6th centuries.

From the 7th century until the end of the Qing Dynasty, I consistently adopt the term "**restoration-bureaucratic state (society)**" (复辟官僚国家/社会), simultaneously pointing out that the **restoration-bureaucratic state** began to mature during the Song Dynasty.

I have also clearly differentiated the nomenclature for the ruling class under the oppression of the bureaucratic system in a country like China, compared to the ruling class under the **feudal system** represented by Western Europe and Japan. In China, I refer to them as the "**landlord class**" (地主阶级). Only when referring to regimes with obvious **feudalization** during the Northern and Southern Dynasties, or already **feudalized** frontier regimes like Dali (大理), do I apply the same term used for the European and Japanese ruling classes: "**feudal lords**" (封建领主).

Readers might also harbor a distinct question when I contrast Europe and Japan regarding the noticeable discrepancy in nomenclature between the two.

For example, according to the Japanese's own periodization, immediately after the **Middle Ages and Chūsei** (中世) ended, the **early modern period** (近世) began. However, according to the general periodization of Europe, when the **Middle Ages** ended in 1453, there was clearly still a considerable temporal distance from the modern era in its general sense. This intervening time is designated as the "Early Modern" period, or named after the monumental historical events that occurred, such as the "Renaissance and Reformation period."

What I want to convey is that the reason for such a massive discrepancy in periodization between Europe and Japan is that Europe is a continent vastly larger than Japan, containing multitude of different regimes. The fact is, the fundamental reason 1453 is marked as the end of the **Middle Ages** is due to landmark historical events—the end of the Hundred Years' War and the fall of the Eastern Roman Empire—occurring at opposite ends of the continent. However, this does not imply that social structures underwent sudden, seismic transformations across such a vast territory in a short time. This is entirely different from the hurricane-like, tempestuous changes Japan experienced in the mere 30 years from Oda Nobunaga marching on Kyoto (上洛) to Toyotomi Hideyoshi's death from illness.

Furthermore, people should accustom themselves to the fact that transitions between two "typical" social stages are inevitable.

For example, when people mention European **absolute monarchies** (绝对主义国家), the first thing that comes to mind is undoubtedly France under the rule of the House of Bourbon. But did **absolute monarchies** truly only begin to emerge in the 17th and 18th centuries?

If one examines Machiavelli's *The Prince*, it is not difficult to discover that this work—calling for a powerful monarch to save Italy (*though the author himself ultimately hoped for a republic*)—was published in 1532. At that time, not a single country in all of Europe could explicitly be defined as an **absolute monarchy**. Yet, human thought cannot exist in a vacuum devoid of social reality. The fact that Machiavelli could write *The Prince* somewhat indicates that his society had already generated numerous factors supporting the formation of an absolutist state (*such as the emphasis on civic attitudes, the diversification of methods to seize ruling power, and a monarch's statecraft in employing personnel*). The **absolute monarchy** was already in the process of formation!

This is precisely why I believe there is no need to carve out a separate, standalone stage between a typical **feudal society** like the **Middle Ages** and the **absolute monarchy**. Viewing it merely as a transitional period is entirely sufficient; both the Renaissance and the Reformation movements were themselves prominent, external manifestations of this very transition.

As for why I equate the **absolute monarchies** recognized by Europeans with the **early modern states** (近世国家) recognized by the Japanese, the reason is that many characteristics of the Edo Shogunate were indeed identical to those of European absolutist states.

Regarding my personal nomenclature, there are inherently some issues for which I can only ask readers for their forbearance.

For instance, when describing the period of the Great Migration, the **barbarians** (蛮族)—upon entering the Chinese interior—chose not to undergo **feudalization** according to the general laws of social development. Instead, they compromised with the Han Chinese landlords and pivoted toward bureaucratization policies. I termed this dynamic "**The Landlord-Bureaucrat Compromise**" (地主-官僚妥协).

This nomenclature is admittedly prone to causing misunderstandings, leading people to mistakenly assume that the two negotiating parties in this compromise were the bureaucrats and the landlords. Moreover, for those relatively well-versed in Chinese history, it is even easier to mistake it for an entirely different social phenomenon: namely, the restored **bureaucratic state** utilizing **co-optation through official ranks and stipends** (官位荣禄收买) to appease the **aristocratic great clans** (门阀士族) who acted as massive landowners. They might assume I am describing the political maneuvers behind the centralization trend of the aristocratic clans congregating in the two capitals of Chang'an and Luoyang during the Tang Dynasty.

I admit that I was somewhat hasty in my naming here. What I actually intended to convey is that the small hyphen between "landlord" and "bureaucrat" should be visualized as a rightward-pointing arrow: meaning the **barbarians** "*abandoned becoming landlords in favor of becoming bureaucrats.*" However, it is obviously unlikely for readers to initially adopt this interpretation. If it were named based on the two actual negotiating parties, it should have been called the "*Barbarian-Landlord Compromise.*"

Furthermore, regarding historical sources, it is deeply regrettable that because China's **feudalization** is a profoundly distant event for us, having occurred fifteen or sixteen centuries ago—in an era lacking the printing press and where paper had only just begun to popularize—the historical records could not possibly be as abundant as in later eras. The already limited sources have been scattered and lost over such an immense span of time, leaving even fewer accessible today.

Therefore, apart from rather unspecific records, such as the debate between Liu Yuan (刘渊) and Liu Xuan (刘宣) on which path the Xiongnu should take, it is impossible for us to find blatant and explicit accounts like those in *The Record of Years Since the Jianyan Era* (《建炎以来系年要录》) to study exactly how people at that time viewed this compromise. This is simply a helpless reality.

As for the widespread translation issues deeply embedded in the Chinese language, there are vastly more examples.

For instance, in China, the terms "Emperor" (皇帝) and "Imperial system" (帝制) have been abused to an extent that defies any logical sorting. The supreme ruler of Persia is called an emperor; the

supreme ruler of Mali is called an emperor; the supreme ruler of the Mughals is called an emperor; the supreme ruler of Rome is called an emperor; and the supreme ruler of the Holy Roman Empire is also called an emperor...

Even though everyone knows that these foreign monarchs are entirely different from the Chinese emperor—and that the emperors of the restoration-bureaucratic empires differ drastically even from the emperors of the Qin and Han **classical empires**—such titles have nonetheless been retained. For anyone with a baseline understanding of human history, this should not cause much confusion.

I sincerely hope that those who read this will not forget that I contemplated and wrote down these words while managing academic workloads, and under conditions heavily constrained by various restrictions on access to information.

The existence of inadequacies is, more often than not, a matter of absolute helplessness.

However, I must also clarify that the developmental degree of the Edo Shogunate ultimately could not be placed on par with Western European countries like Britain and France. This was dictated by Japan's national scale, diplomatic scope, and geographical location, and was simultaneously a consequence of Japan's later start in **feudalization**.

Just as one can easily point out the most glaring difference between the Edo Shogunate and European absolute monarchies: European absolutist states had an extraordinarily high ratio of military expenditure to fiscal expenditure and were extremely bellicose; conversely, the Edo period was an exceedingly rare era of prolonged peace in Japanese history. Japan's massive expansion ironically occurred from the Meiji era to the early Shōwa period, *after* the shogunate had ended.

But then again, as I already mentioned when writing the Japan section, Japanese society started much later than Europe. Each of its "standard" historical periods often had to wait until its final stretch to exhibit typicality. For instance, the so-called classical Japan only truly exhibited obvious **classical characteristics** during the final 100 years of the Heian period (the *Insei* / Cloistered Rule era). The so-called medieval Japan only finally realized a **feudal society** fundamentally identical to Europe's during its final 100 years—the Sengoku (Warring States) period.

Therefore, it is perfectly normal for Japan's **early modern society** (近世社会) to exhibit this same lag. There is absolutely no need to discard the entire body just for the sake of the "tail." Just as the Japanese would not refuse to call the pre-Insei Heian period "classical Japan," nor would they refuse to call the Kamakura and early Muromachi periods (preceding the Sengoku) "medieval society."

When people note that the Azuchi-Momoyama regime placed immense importance on and heavily relied upon cities and circulation (都市与流通); when people observe the rich material and spiritual lives of the Edo *chōnin* (townspeople / 町人), it already confirms that Edo-period Japan possessed the characteristics of an **early modern state**, and the characteristics of an **absolute monarchy** (*namely, the growing power of the urban bourgeois/citizen class*).

When the Japanese say "**early modern**" (近世), they emphasize temporal characteristics; when Europeans say "**absolutism**" (绝对主义), they emphasize sociological manifestations. I will simply merge the two and refer to it as the "**Early modern absolute monarchy (society / stage)**" (近世绝对主义国家\社会\阶段). This should not pose any difficulties for the reader.

6, 关于写作的时候出现的问题, 希望得到理解

直到我本科毕业回到西安为止, 所有值得一写的发现和看法都在这里了, 这半年多一点的时光对我而言确实是非凡的。可即使如此, 我新发现的事物越多就越清楚还有不少问题是我个人的能力难以解决的, 很多地方的叙述必然存在不妥之处。让我忧心的并非自己还有太多事不了解, 因为即使是最渊博的学者也不可能穷尽天下所有知识, 人生有涯, 而知无涯, 此万古愁也, 何必哀之。

然而中国的社会环境特殊, 官方学说中合乎情理者凤毛麟角, 再加上我国政府人为制造信息壁垒, 在很多概念上想要与国际社会接轨确实存在很大困难。当我抵达前人没有涉足过的领域时, 对于一些新现象也只能自己先予以命名, 有不合理之处在所难免。已经提到过的一些沿袭我国传统表达的叙述, 在这里再次对任何潜在的读者表示歉意。像汉语里所说的“奴隶制社会”来自苏联的五段论, 虽然哪怕是中国的有识之士也早都知道奴隶制社会根本不是布尔什维克所谓的奴隶主和奴隶二元对立的社会结构, 但是国内也没有一个更为精当的词去替代, 所以我也只能沿用。这个时期的统治阶级是否可以概括为“奴隶主阶级”也存在很大疑问, 我在之前叙述中会把奴隶社会统治阶级这个词替代为“由氏族首领, 宗教祭祀和军事统帅演化而成的早期贵族(说早期是与封建化时期产生的土地贵族相对应)”, 但这也只是我个人的一种看法。更大的一个问题是“资本主义社会”和“资本主义国家”这样的称呼, 中国官方对于西欧和美国统一采取了这样的描述方式, 虽然其中的弊病显而易见, 但是在没有对这些国家的社会有很深入的了解之前, 我也没办法进行别的命名只能沿用国内一般的叫法。现代社会结构之复杂, 分工之细致是前所未有的, 阶级划分不要说比工业革命之前, 即使比马克思的年代也要困难太多, “资本主义社会”这个词在今天确实存在太过夸大资产阶级与无产阶级水火不容的阶级矛盾的嫌疑(但是谁要是真的相信没有矛盾, 那就是傻瓜)。可是如果笼统地把西方国家称为“民主国家”, 那么这又显然没有抓到这些国家的根本共同点, 西方的民主制度显然是建立在一定的社会现实的基础上, 而不可能是凭空长出来的。只要观察那些不具备与西方同等社会条件却试图强行移植西方民主体制的国家, 政治实践失败是常有之事。

我本人对于这个问题其实更倾向于对于所谓“XX制社会”进行再解释, 也就是强调作为限定词的生产要素的首位地位, 指出最主要的剥削方式, 不再强调统治阶级和被统治阶级高度对立作为主要特征。例如奴隶制社会就是劳动力在各生产要素中处于首位地位, 以强迫劳动的方式直接剥削劳动力为最主要的剥削方式的社会; 封建社会就是土地在各生产要素(生产资料)中处于首位地位, 以租税的方式剥削农业生产剩余为主要剥削方式的社会; 资本主义社会就是资本在各生产要素(生产资料)中处于首位地位, 以剥削劳动者剩余价值(这里还是存疑, 但是按照马克思的说法暂时先这么写上)为主要剥削方式的社会。如果这样重新定义的话或许会更合理一些, 而且站在中国人的角度也是更有意义的, 毕竟像马克思那种只考虑典型的阶级社会中的阶级矛盾显然完全不足以解释中华帝国的历史, 我们这里的主要矛盾完全可以讲是官僚阶层和其他所有阶级的。这也是为什么我从23年开始写这些的时候就非常强调虽然必须肯定被压迫人民反抗的正义性和合理性, 但是在谈到统治阶级和被统治阶级之间的矛盾时必须采取审慎的态度, 因为官僚国家利用这一点已经不是一种可能, 而是从苏俄建立以来发生了一个世纪的现实, 人总不能在同一个地方不停跌倒。

当然读到这些记录的人也不要认为我在这些概念使用上就毫无建树, 对于中国以外不了解的事物确实没有办法, 但是在有关中国历史的概念上我还是做了很多拨乱反正的工作。例如中国的官方说法把秦朝至清朝叫做我国的封建时期, 我显然完全抛弃了这种欺骗百姓的傻瓜理论。在我的叙述中, 把秦代两汉一直到西晋称为古典帝国或者古典时期的中国, 而我所说的“封建中国”只是指公元三、四、五、六世纪四百年间的中国社会。从七世纪到清朝结束, 我一直采取“复辟官僚国家(社会)”这一称呼, 同时指出复辟官僚国家是从宋代开始成熟的。对于中国这样处于官僚制度压迫下的统治阶级和以西欧和日本为代表的封建制度下的统治阶级的称呼也做了区分, 在中国我就将他们称为“地主阶级”, 除了对南北朝时期封建化比较明显的政权, 或者是像大理这样已经封建化的边疆政权才会采取对欧洲和日本统治阶级同样的称呼即“封建领主”。

读者还有一个或许会产生明显疑问的地方在于当我把欧洲和日本对照的时候两边的称呼会产生明显的差异, 例如按照日本人自己的划分当中世结束之后马上就已经是近世了。可是按照欧洲的一般划分, 当中世纪在1453年结束之后显然与一般意义上的近代还存在相当距离, 这中间的时间被命名为“早近代”, 或者按照当时所发生的重大历史事件命名为“文艺复兴和宗教改革时期”。我想说的是, 之所以欧洲和日本的时代划分之间产生这样的大的差异, 是因为欧洲是一个比日本大很多的, 有许多不同政权

的大陆。事实就是，1453 年作为标定中世纪结束的时间节点，根本原因是在大陆两端发生了百年战争结束和东罗马帝国灭亡这样的标志性历史事件，但是并不意味着社会结构在如此广大的区域内短时间内发生的巨变，这与日本自从织田信长上洛到丰臣秀吉病逝 30 年间疾风骤雨般的变化是完全不同的。而且人们应当习惯两个“典型的”社会阶段之间存在过渡是不可避免的事情，例如当人们提到欧洲的绝对主义国家时，首先，联想到的一定是波旁王朝统治下的法国。但是绝对主义国家真的是到十七、十八世纪才开始出现吗？如果人们观察到马基雅维利写的《君主论》，那么不难发现这部呼吁一个强大君主拯救意大利（当然作者本人还是最终希望共和）的著作出版于 1532 年，这个时候全欧洲还没有哪个国家能够被明确地说是绝对主义国家。但是人的思想却不可能脱离社会现实而存在，马基雅维利能写出《君主论》多少说明他所处的社会中已经产生了很多支持绝对主义国家形成的因素（例如对公民态度的重视，夺取统治地位方式的多样化和君主的用人之道等），绝对主义国家已在形成当中。这也就是我为什么认为从中世纪这样典型的封建社会再到绝对主义国家之间没必要再单独划出一个阶段，仅仅将其视为过渡时期就足够了，无论是文艺复兴运动还是宗教改革运动本身都是这种过渡的一种显著的外在表现。

至于为什么我将欧洲人所认为的绝对主义国家与日本人所认为的近世国家划等号，原因在于江户幕府的很多特征的确与欧洲绝对主义国家相同。但是我又不得不说，江户幕府的发展程度到底没办法跟西欧的英法等国相提并论，这是因为日本的国家规模，外交规模和地理位置所决定的，同时也是日本封建化开始较晚的结果。就如同人们很容易指出江户幕府与欧洲绝对主义国家最为显见的一点不同，那就是绝对主义国家的军事支出占财政支出比例极高而且极度好战，相反江户时期是日本历史上极为罕见的长期和平的年代，日本的大规模扩张恰恰是幕府结束之后的明治到昭和前期。可话又说回来，就像我在写日本部分就已经提到过的，日本社会比起欧洲来讲起步晚太多，它的每一个“标准的”的历史时期往往得等到最后一段时间才能表现出典型性，比如说所谓的古典日本只有在平安时期的最后 100 年的院政时代才是真正有明显古典国家特征，所谓的中世日本只有在最后 100 年的战国时期才最终实现了和欧洲基本相同的封建社会，所以日本的近世社会也存在这种滞后性再正常不过了。完全没有必要为了一个“尾巴”而放弃全身，就像日本人不会把院政之前的平安时代不叫古典日本一样，也不会把战国之前的镰仓和室町前期不叫中世社会一样。当人们提到安土桃山政权非常重视和依赖都市与流通时，当人们关注到江户町人丰富的物质和精神生活时，这就已经肯定了江户时期的日本具有近世国家的特征，具有绝对主义国家的特征（市民阶级力量壮大）。日本人在说“近世”的时候强调的是时代上的特征，欧洲人在说“绝对主义”的时候强调的是社会表现上的特征，我就干脆把两点合起来说成“近世绝对主义国家（社会\阶段）”，这应该不会造成阅读上的困难。

我个人在命名方面也存在一些问题，只能请读到的人多担待，例如我在描述民族大迁徙时期蛮族进入中国内地之后没有选择按照一般的社会发展规律封建化，而是与中国的汉族地主进行妥协转而采取官僚化政策的时候称这种妥协为“地主-官僚妥协”，这个命名显然容易造成误解，让人误以为妥协的双方是官僚和地主。而且对于对中国历史较为了解的人更容易将它误认为另一种社会现象，也就是已经复辟的官僚国家通过官位荣禄来“收买”作为大土地主的门阀士族。认为我是在描述类似于有唐一代士族向长安、洛阳两京产生集中化趋势背后的政治行为。这个我承认是我在命名的时候有一些草率，其实我想表达的是地主和官僚之间的那个小横杠应该被看作一个向右的箭头，意思是蛮族“放弃成为地主而成为官僚”，不过读的人显然不太可能最初就采取这种理解方式。如果从妥协的双方来进行命名的话，应该是“蛮族-地主妥协”。而且在史料上很遗憾的一点是，因为中国的封建化对我们来说已经是十五六个世纪前十分遥远的事了，在那个缺少印刷术，纸张也刚刚普及的年代史料不可能像后来那样丰富，本来就有限的史料经过这么长的时间散佚现在能读到的就更少了。所以除了像刘渊和刘宣争论匈奴应当采取何种路线那样不甚具体的记录，我们不可能找到像《建炎以来系年要录》那般直白和露骨地记载以研究当时的人是怎么看待这种妥协，这也是没办法的事。

至于那些汉语中很普遍的翻译问题就更多了，例如在中国“皇帝”和“帝制”已经滥用到了一种没办法重新梳理的程度，波斯的最高统治者叫皇帝，马里的最高统治者叫皇帝，莫卧儿的最高统治者叫皇帝，罗马的最高统治者叫皇帝，神圣罗马帝国的最高统治者还叫皇帝…虽然哪怕人人都知道这些外国的君主跟中国的皇帝完全不一样，甚至于官僚复辟帝国的皇帝跟秦汉古典帝国的皇帝也已经差异极大了，但是这样的称呼还是被保留下来，对于对人类历史有一定了解的人来说这应该不会造成困扰。希望读到的人不要忘记我思考并写下这些文字本身就是在有学业任务，并且在信息接触方面受到种种限制的条件
